DESCRIPTION

The Megger AVO410 digital multimeter has been designed for the contracting electrician and has the additional features that also make the instrument suitable for wide range of applications and users.

The instrument offers AC and DC voltage and current measurements as well as resistance, frequency and capacitance ranges. True RMS readings on the AC functions are standard on the AVO410 and the instrument features a CATIV 600 V safety rating meaning the instrument is suitable for industrial applications.

The slim, compact case has a tough rubberised holster that provides that extra degree of protection from the extreme conditions found in industrial environments. The style of the case and positioning of the function switch and buttons means the unit sits comfortably in the palm for single handed use.

Continuous references to the user guide have been avoided by the AVO410 utilising simplified functions.

The display features a back light that allows measurements to be made in poorly lit areas.

The AVO410 test leads are supplied with silicon cable and have GS38 compliant shrouded tips on the prods.

Auto-ranging

When first selected, all functions are auto-ranging. A range button on the AVO410 allows multiple manual range selection on each function; a feature that is generally welcomed by many users.

Minimum / Maximum measurements

The instrument has a MIN MAX function that allows the user to switch between minimum and maximum measurements. The display does not have to be continually monitored to capture a momentary increase or fall in readings.

Data hold

This function allows a displayed result to be frozen on the display which avoids having to remember a measurement value. The hold function can be nested within the MIN MAX feature which stops the AVO410 continuously updating the minimum and maximum measurement values.

Voltage measurements

Both AC and DC voltage measurements up to 750 V and 1000 V respectively are possible with the AVO410, the AC reading being a true RMS value.

Current measurements

For current measurements up to 10 A, a separate fused terminal is provided to protect both user and instrument from excess current.

Continuity / diode testing

The continuity function features a buzzer and provides the user both optical and audio indication of identifying and confirming continuity between two points. This function also allows forward and reverse bias testing of diode and semiconductor junctions.

RS232

The RS232 feature has been disabled.

Resistance, capacitance and frequency

Resistance can be measured directly on the ohms range from 0 to 60 MΩ with capacitance measurements from 0 to 6.000 mF. In addition, frequency measurements from 0 to 60 MHz are possible.

*1) AC conversion type

Conversion type and additional specification are the same as DC/AC voltage.

NOTE: The DCμA input terminal is protected by 3.6 kΩ PTC (600 V rated) thermistors. The loading effect of these devices may cause measurement errors on low impedance circuits (<100 kΩ).

Note: When measuring current on the A current terminal the instrument has an internal impedance of 0.01 Ω at AC/DC A in series with circuit under test.

The loading effect may cause measurement errors on low impedance circuits.

For example: Measuring a 1 Ω impedance circuit will cause a -1 % measuring error. The error percentage of the loading effect of the meter can be expressed as the following:

$$100 \times \frac{-0.01 \Omega}{Z_{\text{circuit}} + 0.01} \%$$

or

$$100 \times \frac{-E_{\text{Burden}}}{E_s} \%$$

Note: The DCµA input terminal is protected by 3.6 kΩ PTC (600 V rated) thermistors.

The loading effect of these devices may cause measurement errors on low impedance circuits (<100 kΩ).
